

FORGET THE CRACKS.

// *The new C PROTECTOR.
For the perfect hole in the
hardest porcelain tiles.*

 **C PROTECTOR**

 **alpen**
drill better.

The drill experts – since generations

We are the only full-service provider in Europe for drilling tools from our own in-house production facility and the leading manufacturer of metal, masonry and wood drill bits. Absolute top quality has been standard practice for us as an Austrian family-owned business for over 60 years. Whatever you need: We can supply the right drill bit so you can achieve optimum results faster, more efficiently and with greater precision. In other words: We make sure your perfect work result.

The perfect hole, even under the toughest conditions.

Where does satisfaction begin? If a product is already very good and creates a perfect hole, why should it be further improved? At ALPEN we try to compensate for every drilling condition, even those that we cannot control. We do not know what drill you work with. We do not know the exact manufacturing conditions of your tile. And yet we guarantee you the perfect hole, with no cracks at all. This was the aim of our research and development department for the new C PROTECTOR – the perfectionist for the hardest porcelain tiles.

WE MEET HARDNESS WITH STABILITY.

The recipe for the perfect hole: the right drill bit

// No more fear of tears and drill with absolute confidence. Eliminate any chance of cracking, and the stress that goes with it, when you drill into the hardest porcelain tiles. The result – a perfectly precise hole. The new ALPEN C PROTECTOR achieves this with its unique tungsten carbide plate geometry. The new conical embedding in the base body increases the breakage resistance. At the same time, the temperature is quickly dissipated. The shortened neck increases the stability of the drill bit and reduces the

torsion forces, thus increasing the life time. The new anti-slip shank with its special six-groove design prevents slipping in the chuck and ensures optimum torque transmission. These guarantees are reassuring and suddenly you can hardly wait to drill the next tile. And even with a higher spindle speed compared to its predecessor on all commercially available power tools – all without cooling.

No positioning difficulties

With the help of the centering tip for a precise hole.

Increased stability

Shortened neck lowers torsion forces, reduces spring/rattling and increases life time.

Patented tungsten carbide plate

Conically embedded cutting insert for increased breakage resistance.

Precision

The red coloured ring indicates the ideal drilling depth.

Safety

Unique anti-slip shank prevents slipping in the chuck and ensures optimum torque transmission.

C PROTECTOR

Range of application:

For extremely hard porcelain tiles up to Mohs / Ritz hardness 9 and glass.
No cooling required. Not suitable for percussion drilling.

- // TC plate with patented special cutting edge for optimal drilling results
- // More stability due to shortened neck
- // Perfect grip in all chucks thanks to unique anti-slip shank
- // Crack-free drilling
- // Precise positioning thanks to the centering tip

For hardest porcelain tiles up to Mohs / Ritz hardness 9

Highly accurate centering

Ideal for dry drilling

Anti-slip shank

Spindle speed max. 600 rpm
(depending on diameter)

FOR HOLES – WITH NO CRACKS AT ALL.

This makes every hole in porcelain tiles a success.
